- Stored procedures and functions

DevTools

- NetBeans IDE
- MySQL Workbench
- SVN

WordPress Repo Plugins

- RDP Linkedin Login
- RDP Wiki Embed
- RDP PediaPress Embed
- RDP Google Custom Search

Summary

I'm a freelance Atlanta WordPress developer and programmer. I specialize in website development, maintenance and support, as well as plugins. Although my focus has been the WordPress platform, since 2010, I began my career as a web developer nine years prior. Despite being in Atlanta, GA, I've performed WordPress programming for clients throughout the United States and worldwide. To put it simply, I have the experience and expertise to deliver the type of results you desire.

Work History

2006 - Present

Owner
RDP TechSolutions, LLC

As a talented Contract Web Developer, I have been responsible for web development related projects for various clients and corporations, small businesses and websites, primarily involving WordPress back-end, but some front-end development.

Also responsible for development and maintenance of multiple free content-based websites, primarily with the WordPress Content Management (CMS) Platform, and all monetized through advertising and affiliate marketing programs, including Google AdSense, Chitika, eBay, Amazon, and Commission Junction.

Experience Spotlight

Since March, 2014, I have been steadily engaged by an Atlanta-area LiMS ISV client, and tasked to configure and customize solutions to the client's complex needs, using a combination of programming skills (namely PHP, HTML, CSS, and JavaScript). Primary responsibilities include:

- Report directly to the CEO
- Perform ongoing back-end, middle-tier and front-end maintenance and development of WordPress websites, including creating plugins
- Mark-up and script interfaces and content on content managed, responsive websites that work flawlessly on desktop, tablet, phone, and other devices.
- Maintenance and development of ETL (extract, transform, load) processes that perform database inserts and/or updates

Experience Spotlight

From April to July, 2013, I was engaged by an Atlanta-area automobile protection company, where I completed the following projects:

- Migrated the company's DotNetNuke site to Wordpress
- Completed LAMP setup on Rackspace cloud server
- Coded against Salesforce.com API to insert leads
- Coded dynamic vehicle search form

Certifications

2000 - 2001

Client/Server & Web Development Techniques w/SQL Server
California State University, Fullerton – UEE

Education

1992 - 1993

Bachelor of Arts, Business Administration
California State University, Fullerton
